

FIDELITY L&G FUTURE WORLD ANNUITY AWARE FUND CLASS 11

Fund objective

This Life Fund invests in an underlying fund managed by Legal & General Assurance (Pensions Management) Limited. The Fund aims to improve potential outcomes for investors likely to purchase fixed annuities by providing a diversified exposure to assets that reflect the broad characteristics of investments underlying a typical traditional level annuity product, incorporating Environmental, Social and Governance ("ESG") considerations as part of the investment strategy. The Fidelity fund invests in the underlying fund through a reinsurance policy with Legal & General Assurance (Pensions Management) Limited.

Performance as at 31.12.2024

Past performance is not a reliable indicator of future results.

Yearly performance

	1 January 2020 to 31 December 2020	1 January 2021 to 31 December 2021	1 January 2022 to 31 December 2022	1 January 2023 to 31 December 2023	1 January 2024 to 31 December 2024
Fund	11.0%	-5.1%	-29.4%	7.2%	-3.7%
Benchmark	11.4%	-4.9%	-31.5%	3.8%	-2.5%

Annualised performance

	1 Year	3 Years	5 Years	Since Launch
Fund	-3.7%	-10.0%	-5.1%	1.3%
Benchmark	-2.5%	-11.5%	-6.0%	1.0%

Figures reflect the return on investment after the fund's charges have been deducted.

Annual management charge

0.310%

Other charges

0.000%

Total expense ratio

0.310%

The total expense ratio (TER) is a measure of the total costs associated with managing and operating an investment fund. The charges are reflected in the quoted unit/share price for the fund and are not deducted directly from your account. The TER does not include any transaction costs which are incurred in the buying and selling of funds or their underlying investments. A full explanation of fund charges can be found in your plan literature.

Fund management style

Passive

Please note that some fund objective updates are made outside of our standard reporting cycle. This means the benchmark information above may not match the benchmark shown beneath the new fund objective in the left hand column. This information will be updated in the next quarterly published factsheet.

The majority of our funds will not be available for review on external fund websites by searching for the ISIN or SEDOL numbers.

Risk rating

Lower risk/return

Higher risk/return

L2 - Lower-Medium risk/return

Less emphasis is placed on capital preservation than in the lower risk/return category introducing a chance of higher potential returns. Compared to the lower risk/return category there is more of a risk of your fund value going down but in return for this there may be a better chance of your fund value experiencing a higher rate of growth.

Risk ratings on this factsheet are assigned by Fidelity. They are an indication only and take into account the volatility of the underlying fund, based on past performance (where this is available), and an internal assessment of the underlying asset types in the fund. Ratings may change, do not imply or offer any guarantee, and only apply to, and in comparison with, the funds made available by Fidelity's DC business.

Please note that the breakdown of underlying funds shown may not equal 100% due to buying/selling over a month end resulting in the fund being slightly in debit or credit. Where derivative instruments are held they are generally represented in the appropriate asset or sector categories. When an "other" category is shown, it may include some derivative types such as volatility index futures and total return swaps.

Reference in this document to specific securities should not be considered as a recommendation to buy or sell these securities, but is included for the purposes of illustration only.

Top holdings are those securities in which the largest percentage of the fund's total assets are invested. Investments made through derivative instruments and other securities issued by the same company are listed separately. Foreign exchange currency related derivative instruments and other derivatives similar to money market instruments, such as interest rate swaps, are excluded from the top holding calculation.

FIDELITY L&G FUTURE WORLD ANNUITY AWARE FUND CLASS 11

ESG Fund Rating and Quality Scores

The investment analysis company, MSCI, rates funds according to how well the companies into which the funds invest, take account of environmental, social and governance (ESG) factors. It provides scores of 1 to 10 (with 10 being the highest) in the three 'pillars' - E, S and G - and converts them into an overall rating from CCC to AAA (with AAA being the best). You can find out more about sustainable investing at <http://fidelitypensions.co.uk/sustainable-investing>

The relevant criteria and weightings are chosen by MSCI and different criteria and weightings used by other analysts may produce different results. This is a snapshot of the portfolio at the date indicated. Past ESG ratings are not reliable indicators of future ESG ratings. Representation of this ESG data is for information purposes only and does not mean the fund is committed to reaching or maintaining any level of ESG performance. The data shown should not be interpreted as promoting any ESG characteristics for the fund or indicating a sustainable investment objective. For further detail on the criteria and calculations used please contact Fidelity. If you are in any doubt whether a fund is suitable for you please contact a regulated financial adviser.

Breakdown as at 31.12.2024

Fund	ESG Fund Rating	E Score	S Score	G Score
L&G Future World Annuity Aware Fund	N/A	N/A	N/A	N/A

 n/a will be displayed when there is no ESG data available for the fund or the fund is not ESG rated. The information is as at the date of production based on data provided by MSCI. There may be timing differences between the date at which data is captured and reported. For more up to date information you can visit <https://www.msci.com/esg-fund-ratings>

Carbon Footprint

The investment analysis company MSCI measures a fund's carbon intensity by calculating how much CO2 is emitted by the companies it invests in. To allow companies of different sizes to be compared, the figures are adjusted according to the value of each company's sales. The table on the right shows emissions in terms of tons of CO2 for each million dollars' worth of sales.

MSCI has provided the following guidance for assessing the figures shown in the table. These ratings help to show where each fund stands in relation to the fund marketplace as a whole. As in the table, the figures are for tons of CO2 for each million dollars' worth of sales.

Very high	High	Moderate	Low	Very low
525 tons or more	250 to 524 tons	70 to 249 tons	15 to 69 tons	less than 15 tons

FIDELITY L&G FUTURE WORLD ANNUITY AWARE FUND CLASS 11

Risk factors explained

1. **Concentrated portfolio.** The fund may invest in a relatively small number of stocks, which may mean it carries more risk than funds that spread their investments across a larger number of companies.
2. **Derivative exposure.** The fund invests in derivatives as part of its investment strategy, over and above their use for efficient portfolio management. Derivatives are a type of financial instrument and in some circumstances can make a fund riskier and more volatile than would be expected from a fund that doesn't use derivatives. There is also the risk that the company issuing the derivative may not honour their obligations which could lead to the fund losing money.
3. **Efficient portfolio management.** The fund may use other investment instruments in place of actual underlying securities - such as options, derivatives or warrants - apart from or in place of the actual underlying securities, so it can be managed more efficiently. This process is called 'efficient portfolio management'. These instruments can be used to effectively take a position (or reduce an existing position) in a share or index, so changes can be made more quickly and cost effectively than dealing directly in the underlying investment. They are not generally used with the aim of amplifying returns. However, in some circumstances, they can make the fund more riskier and more volatile than would be expected from a fund that only invests in shares.
4. **Emerging markets.** The fund invests in securities listed within emerging markets. These markets may be less developed than others and so there is a greater risk that the fund may experience greater volatility and a range of factors could make it harder to buy and sell investments. There is also an increased chance of political and economic instability and stocks listed within emerging market(s) can be less liquid (harder to sell) than some listed within developed countries. The effects of currency exchange rate movements on an investment may also be greater in emerging markets. Because of these factors, these investments carry more risk.
5. **Ethical restrictions.** The fund does not invest in certain industry sectors or companies because of the ethical or sustainability policies that guide the fund manager's selection of investments for the fund. Funds with an ethical focus may perform favourably or unfavourably in comparison to similar investments without such focus.
6. **Exchange rate.** The fund may invest in securities denominated in overseas currencies or that are different to the fund's base currency. This means the value of these investments and any income from them may, therefore, decrease or increase as a result of changes in exchange rates.
7. **Geared investments.** The fund focuses on geared investments such as warrants or options. These carry a higher degree of risk than other stock market investments. It is possible that the fund may suffer sudden and large falls in value and so the loss on an investment could be very high and could even equal the amount invested, in which case you would get nothing back.
8. **High yield bonds.** The fund invests in high yield bonds. The prices of high yield bonds can be more affected by economic conditions and changes in interest rates than those of investment grade bonds (bonds from issuers with good credit ratings), plus have a greater risk of default (fail to make a required interest or principal repayments). Income levels may not be achieved and you may not get back the amount you invest.
9. **Specialist.** The fund is specifically aimed at sophisticated investors and is particularly high risk, because it concentrates on a region that may be exposed to unusual political or economic risks. You should only invest if you are comfortable with the specific risks pertaining to the fund in question.
10. **Income eroding capital growth.** The fund focuses on income, which may reduce the potential of capital growth. Any income generated cannot generally be withdrawn from a pension account until retirement and will be reinvested in the fund.
11. **Liquidity.** The fund can suffer from partial or total illiquidity. This means at times it may be difficult or impossible for it to sell some or all of its holdings. As a result, there could be considerable price fluctuations and the inability to redeem your investment. Please be aware of this risk, especially if you are close to retirement.
12. **Performance charges.** The charges vary depending on the fund's performance.
13. **Property funds.** The fund invests directly in physical property. Due to the illiquid nature of the underlying assets, there may be delays in completing your instructions to sell. In exceptional circumstances, the manager of the fund has the authority to stop investors from selling some or all of their holdings in the fund. Please be aware of this risk, especially if you are close to retirement as it may be difficult to sell the units you hold in such funds. Any decision to invest in physical property should be carefully considered in line with your planned retirement goals. The value of physical property is generally a matter of a valuer's opinion rather than fact. Property transaction costs are high (typically around 5% or higher due to legal costs, valuations and stamp duty) and as such you may receive a value that is lower than anticipated.
14. **Sector specific funds.** The fund concentrates on investing in a specific industry sector or area. Funds which invest in specific sectors may carry more risk than those spread across a number of different sectors. They may assume higher risk, as markets/sectors can be more volatile. In particular, gold, technology and other focused funds can suffer as the underlying stocks can be more volatile and harder to sell.
15. **Smaller companies.** The fund invests in smaller companies. These can be more volatile and harder to sell than the shares of larger companies, which means they can involve more risk.
16. **Solvency of depositary.** The value of the fund may be negatively affected if any of the institutions with which cash is deposited becomes insolvent or experiences other financial difficulties.
17. **Solvency of issuers.** The fund invests in bonds and there is a risk that issuers may default (fail to make a required interest or principal repayments), which could mean you may not get back the amount you invest.
18. **Volatility.** Investments in the fund tend to be more volatile and you should expect wide fluctuations (both up and down) in the fund's price.
